SCIENCE DEPARTMENT • SCIENCE LITERACY & LESSON INTERNALIZATION

PLC AGENDA

Writing Benchmark → Anticipated Student Thinking → Feedback + Student Action

Science Literacy Evidence Cycle — Begin with one standards-aligned writing benchmark and plan how students will use feedback to strengthen the same task.

MONDAY, OCTOBER 26, 2026 | **41 MINUTES** | **GRADES 9–12 SCIENCE • BRING FORMS & EVIDENCE**

TODAY'S OUTCOME Leave with one upcoming writing benchmark/task, a clear bar for mastery, one anticipated complete CER response and one partial response, one feedback prompt, and one explicit student revision action to carry into Tuesday and Wednesday.

WHY THIS PLC MATTERS The benchmark task is most useful when teachers anticipate the science thinking and literacy moves it requires before students complete it. Today makes the CUBS source annotation, complete/partial CER response, success criteria, feedback, and student action visible without lowering the science demand.

PROTOCOL CONNECTION

Every Day Questions 1, 3, and 4: clarify the task, criteria, anticipated thinking, student experience, and feedback. Team Deep Dive Steps 2–4: plan access, student action, and evidence to collect.

WHAT TO BRING

One upcoming writing benchmark, CER, model explanation, investigation response, or data-analysis task; the lesson plan; source/article/data/model; anticipated or exemplar response; success criteria; colored highlighters if useful; Lesson Internalization Tool. Use the CUBS student example as a reference. Optional: a related unit-test standard/question for context only.

FOCUS TO PROTECT

Students use CUBS to read and annotate the source, then identify and complete claim, evidence, and reasoning in the response. Use the routines as brief supports—not separate assignments, grading systems, or disconnected activities.

TODAY'S PLC PLAN

TIME (MIN)	FOCUS	WHAT TO DO	PRODUCT / CHECK
0:00–4:00	**Reconnect to the weekly evidence cycle**	Restate the priority standard/skill and keep one benchmark task at the center from planning through Friday evidence review.	**Evidence story**
4:00–10:00	**Clarify the benchmark + bar**	Use the actual writing task to name the prompt, source/evidence, student product, success criteria, and what students must make visible.	**Task + criteria**
10:00–17:00	**Model the student CUBS → CER demand**	Use the CUBS example to see how students annotate the source, then identify and complete claim, evidence, and reasoning in the response.	**Visible thinking**
17:00–25:00	**Anticipate + judge student thinking**	Name what a complete response meeting the standard shows, then identify a likely partial response, misconception, access need, or evidence/reasoning confusion.	**Mastery + need**
25:00–36:00	**Protected course-alike planning**	Plan one feedback prompt that sends students back to the evidence or science idea, then name how students will identify, complete, or revise CER.	**Feedback + action**
36:00–41:00	**Close + carry forward**	Prepare the same task, one criterion, anticipated response, feedback prompt, student action, and a small calibration item for Tuesday and Wednesday.	**Calibration set**

PROTECTED INDIVIDUAL WORK WITH COLLEAGUE SUPPORT

WORK WITH COLLEAGUES

WHAT TO DO Use the protected block to internalize the benchmark and plan independently first; then use colleagues to sharpen one anticipated student need, feedback prompt, and student action while keeping students responsible for the science thinking.

1. **Select the same upcoming benchmark:** Use one writing task, source, student product, and priority standard/skill already connected to course planning.
2. **State the bar for mastery:** Name the criteria and what a complete claim, evidence use, reasoning, language, or representation makes visible.
3. **Model CUBS → CER:** Use CUBS to annotate the source, then identify and complete the CER response students are expected to produce.
4. **Anticipate + judge a response:** Identify what a partial response, access need, evidence issue, or reasoning gap would look like against the agreed bar.
5. **Plan feedback + CER action:** Write a prompt that returns students to the task and state how students will identify, complete, or revise CER.

USE THIS REFERENCE DURING GROUP WORK

BEGIN WITH THE BENCHMARK

Keep the task, priority skill, source/evidence, student product, and criteria visible. The task—not a generic routine—drives the planning conversation.

MAKE THINKING VISIBLE

Students use CUBS to annotate the source; color-coded CER helps them identify and complete the claim, evidence, and reasoning in the response.

FEEDBACK MUST LEAD TO ACTION

Plan a criterion-based prompt that asks students to return to the evidence and identify, complete, revise, compare, or correct CER without being given the answer.

COLLABORATION IN PRACTICE Protect time for thoughtful individual work; use respectful, student-centered feedback to make the next decision clearer.

TEACHER RUBRIC CONNECTION **Standard I: I-A-4 Well-Structured Lessons • Standard II: II-A-2 Student Engagement • Standard II: II-D-2 High Expectations • Standard IV: IV-C-1 Professional Collaboration**

01 **Select the benchmark**
Use the same task, source/evidence, product, and priority skill.

→

02 **CUBS → CER**
Students annotate the source, then identify and complete claim, evidence, and reasoning.

→

03 **Judge the bar**
Name what a complete response meeting the standard shows and what is partial.

→

04 **Plan feedback + action**
Write a prompt and the CER revision/response it should produce.

→

05 **Carry forward**
Bring the same task and one calibration artifact to Tuesday/Wednesday.

TODAY'S MOVE: CUBS source → complete/partial CER → criterion-based feedback → student revision/action
