Name:_____ Date:_____ Lesson:_____

NBHS Math PLC: Post-Lesson Sharing

Purpose: In small groups, teachers will return to the lesson they previously shared and reflect on its implementation and effectiveness. Teachers will use student work from the lesson to examine what students learned, where students struggled, and how the evidence should inform next instructional steps.

Sharing Teacher:

1. **What Happened?**
   a. Where did students seem most engaged in mathematical thinking? Where did engagement drop?
   b. What instructional move seemed to have the greatest impact on student learning?
   c. What challenges came up with pacing, directions, grouping, representations, or the task itself?
   d. At what point did you realize students were understanding (or not understanding)?
   e. What happened during the lesson that you did not anticipate before teaching the lesson?
2. **What does the evidence tell us?**
   Take a moment to share the student work samples that you brought to PLC
   a. What does the student work show that students understood from the lesson?
   b. Where do we see misconceptions or incomplete understanding in the student work?
   c. What are students doing correctly that we want to highlight?
   d. What evidence of student reasoning do you see?
   e. Does the student work align with the goal/objective of the lesson?
   f. What is the most important pattern or takeaway from the student work?
3. **What's next?**
   a. What will you keep from this lesson for next time?
   b. Is there something you would approach differently if you taught the lesson again?
   c. What instructional move might strengthen the lesson next time?
   d. What does the student evidence suggest you should do next?

Notes/ideas:

Name:_____ Date:_____ Lesson:_____

NBHS Math PLC Post-Lesson Sharing: Questions/Feedback

Implementation Focus Discussion/Feedback

The listening teachers should ask questions/provide feedback on the lesson being presented.

1. **What Happened?**
    a. One thing I notice from your reflection is…
    b. I think it's interesting that students…
    c. I wonder what might have happened if…
    d. Something similar happened in my lesson when…
2. **What does the evidence tell us?**
    a. A pattern I notice across these samples is…
    b. One piece of evidence that stands out to me is…
    c. I notice students are consistently able to…
    d. I notice students are still struggling with…
    e. This sample gives us evidence that…
    f. I wonder what students were thinking when they…
3. **What's next?**
    a. I think it's important that we notice…
    b. One opportunity I see for the next lesson is…
    c. This makes me think the next instructional step could be…
    d. I wonder if a quick re-engagement with ___ would help students…
    e. Something I would want to preserve in the next lesson is…
