

# PLC AGENDA

# Student Evidence: Feedback & Participation

*Use current evidence to anticipate participation and feedback that move learning forward.*

FRIDAY, SEPTEMBER 18, 2026

46 MINUTES

GRADES 9–12 SCIENCE • BRING THE SAME LESSON FORWARD

**TODAY'S OUTCOME** Leave with one shared learning-and-participation pattern, evidence that supports it, and an anticipated feedback or participation move that will guide the team's next instructional response.

**WHY THIS PLC MATTERS** Reviewing student evidence together helps teams identify what students understand, how fully student thinking is visible, where reasoning remains partial, and how participation and feedback can move learning forward.

## PROTOCOL FOCUS

Lesson Internalization Tool — After-Lesson Reflection and Forward Planning; Team Deep Dive Step 4: monitor learning, plan for participation, provide feedback, and use data to inform instructional decisions.

## WHAT TO BRING

A small anonymous set of student work, exit responses, observation notes, or another evidence source from a recently taught lesson; optional quick participation notes.

## FOCUS TO PROTECT

Look for patterns in student thinking and participation—not individual students. Keep feedback anchored in evidence and directed toward a next student action.

## TODAY'S PLC PLAN

| TIME (MIN)  | FOCUS               | WHAT TO DO                                                                                                                             | PRODUCT / CHECK                  |
|-------------|---------------------|----------------------------------------------------------------------------------------------------------------------------------------|----------------------------------|
| 0:00–4:00   | Reconnect           | Name the learning goal and evidence source. Set a participation lens: how was student thinking visible?                                | Shared focus + lens              |
| 4:00–12:00  | Quick evidence sort | Sort examples by strengths, partial thinking, and participation patterns: where did students explain, model, use evidence, or respond? | Initial evidence sort            |
| 12:00–34:00 | Protected team work | Identify the shared pattern. Discuss what the evidence shows about learning and how fully student thinking was visible.                | Learning + participation pattern |
| 34:00–41:00 | Anticipate the move | Name the priority need. Anticipate a feedback prompt or participation routine that gives students a next action.                       | Priority need + anticipated move |
| 41:00–46:00 | Reflection & close  | Write: What evidence pattern will guide feedback and participation in the next lesson?                                                 | Evidence-based next step         |

## PROTECTED COLLABORATIVE WORK

### WORK WITH COLLEAGUES

**WHAT TO DO** Complete these steps with your course-alike team or co-teaching partner.

- 1. Anchor in the learning goal:** Keep the review connected to what students were expected to learn and demonstrate.
  - 2. Sort learning and participation evidence:** Notice approaches, strengths, partial understanding, and how student thinking was visible in work, talk, models, or responses.
  - 3. Name the shared pattern:** Describe what the evidence suggests about learning and participation across the class without focusing on individual students.
  - 4. Anticipate the next move:** Choose a feedback prompt or participation routine that gives students a clear next action while keeping the thinking with them.
- ✓ **Completion check:** Each team leaves with one shared learning-and-participation pattern, evidence that supports it, and an anticipated move for the next lesson.

## USE THIS REFERENCE DURING GROUP WORK

### LEARNING GOAL

Begin with the knowledge, skill, language, or practice students were expected to demonstrate.

### LEARNING + PARTICIPATION PATTERN

Name a shared pattern supported by student evidence, including how student thinking was visible in the task or conversation.

### ANTICIPATE THE MOVE

Identify one evidence-based feedback prompt or participation routine that should guide the next student action.

**COLLABORATION IN PRACTICE** Collaborate with respect and precision: examine the evidence, use asset-based language about students, and keep feedback connected to a next student action.
