SCIENCE DEPARTMENT • SCIENCE LITERACY & LESSON INTERNALIZATION

PLC AGENDA

Read Student Writing → Give Feedback → Plan the Next Step

Science Literacy Learning Cycle — Read completed student writing against the mastery bar, write one comment students can act on, and plan one short next step toward the standard.

FRIDAY, OCTOBER 30, 2026 | **46 MINUTES** | **GRADES 9–12 SCIENCE • BRING FORMS & EVIDENCE**

TODAY'S OUTCOME Leave with an agreed mastery bar, evidence from completed student writing, one written feedback comment students can act on, and one short next step with an evidence check for the standard.

WHY THIS PLC MATTERS Completed student writing shows what learners can already do and what they need next. Reading the work against an agreed bar makes feedback and next steps precise while protecting the grade-level science thinking in the task.

PROTOCOL CONNECTION
Every Day Questions 1, 3, and 4; Team Deep Dive Steps 3–5; After-Lesson Reflection: clarify the standard and student product, read evidence in the work, respond with feedback, and adjust practice for the next learning experience.

WHAT TO BRING
3–5 de-identified completed writing samples; the task and source; the standard; current feedback or revision notes; next lesson materials; and the Lesson Internalization Tool. Every science course brings a comparable written response from its own course.

FOCUS TO PROTECT
Read the work, not the student. Describe what is present in the writing, name one priority need, and keep the feedback and next step tied to the same standard. Do not rank students, teachers, classes, or courses; do not design a broad reteach plan.

TODAY'S PLC PLAN

TIME (MIN)	FOCUS	WHAT TO DO	PRODUCT / CHECK
0:00–4:00	**Open the cycle**	Revisit the task, the writing students produced, and today's four steps. Each step produces one product.	**Purpose + steps**
4:00–10:00	**Step 1: Set the bar**	Agree on what a strong response must include: claim, evidence, reasoning, and clear science language. Each course team uses its own task and standard.	**Shared criteria**
10:00–22:00	**Step 2: Read the writing**	Read 3–5 de-identified samples and use three marks only: what students can do, one priority need, and the criterion to name in feedback.	**Writing evidence**
22:00–30:00	**Step 3: Write the feedback**	Write one short comment in three parts: name the criterion, point students back to their work, and ask for one action. Do not give the answer.	**Feedback comment**
30:00–41:00	**Step 4: Plan the next step**	Choose the student action, the teacher move, and one short evidence check that show whether the criterion improved.	**Next step + check**
41:00–46:00	**Close the cycle**	Confirm the feedback, the student action, and the evidence to collect next. Keep the writing samples for the next PLC.	**Evidence commitment**

PROTECTED INDIVIDUAL WORK WITH COLLEAGUE SUPPORT

WORK WITH COLLEAGUES

WHAT TO DO Read and plan independently first. Then use colleagues to check one thing: does the written feedback match the evidence in the student work, and will it move the same standard forward?

1. **Set the bar:** Agree on claim, evidence, reasoning, and science language before reading work.
2. **Read the writing:** Mark what students can do and name one priority need.
3. **Write the feedback:** Name a criterion, point to the work, and ask for one action.
4. **Plan the next step:** Choose one student action, one teacher move, and one evidence check.
5. **Close the cycle:** Confirm the feedback, revision, and evidence to collect next.

USE THIS REFERENCE DURING GROUP WORK

READ THE WORK, NOT THE STUDENT
Start with what students can do, then name one priority need. Describe the writing in plain evidence language and keep the same standard in view.

FEEDBACK STUDENTS CAN ACT ON
Every comment names a criterion, points students back to their own work, and asks for one action: revise reasoning, select evidence, correct, clarify, compare, or extend.

ONE NEXT STEP, ONE CHECK
Choose one student action and one teacher move, then collect one short piece of new evidence to see whether the criterion improved.

COLLABORATION IN PRACTICE Protect time for thoughtful individual work; use respectful, student-centered feedback to make the next decision clearer.

TEACHER RUBRIC CONNECTION Standard I: I-A-4 Well-Structured Lessons • Standard II: II-D-2 High Expectations • Standard IV: IV-A-1 Reflective Practice • Standard IV: IV-C-1 Professional Collaboration
