SCIENCE DEPARTMENT • SCIENCE LITERACY & LESSON INTERNALIZATION

PLC AGENDA

From Benchmark Reflection to Lesson Planning for Learning

Science Literacy Learning Cycle — Use Monday's completed benchmark, anticipated responses, and reflections to plan learning, access, facilitation, feedback, revision, and standard mastery.

TUESDAY, OCTOBER 27, 2026 | **41 MINUTES** | **GRADES 9–12 SCIENCE • BRING FORMS & EVIDENCE**

TODAY'S OUTCOME Leave with an upcoming lesson or learning sequence that makes the standard, mastery bar, task progression, access supports, facilitation moves, written feedback, revision action, and evidence look-for clear.

WHY THIS PLC MATTERS Monday's shared student experience becomes useful when it changes the lesson teachers plan. The task analysis and anticipated responses guide a coherent learning arc that keeps students responsible for the science thinking.

PROTOCOL CONNECTION
Every Day Questions 1, 3, and 4; Team Deep Dive Steps 2–4: plan the key learning goal, expected student thinking, access and engagement, facilitation, feedback, pacing, and student evidence.

WHAT TO BRING
Monday's completed benchmark/task analysis and Lesson Internalization reflections; current unit plan and lesson materials; applicable course standard; an upcoming student task or writing prompt; and laptop/planning materials.

FOCUS TO PROTECT
Plan the learning students need before they complete the benchmark or comparable task. Use CUBS/CER as supports for accessing and making thinking visible—not as separate lessons or grading systems.

TODAY'S PLC PLAN

TIME (MIN)	FOCUS	WHAT TO DO	PRODUCT / CHECK
0:00–4:00	**Reconnect to Monday evidence**	Revisit the task analysis, anticipated student questions/mistakes, mastery bar, and one Lesson Internalization reflection.	**Shared evidence**
4:00–10:00	**Name the learning target + mastery bar**	Clarify the standard, science idea, language/literacy demand, student product, and what students must make visible to meet the bar.	**Target**
10:00–18:00	**Plan the learning arc**	Design a progression from source/visual analysis to discussion, explanation, CER writing, and a checkpoint that prepares students for the task.	**Learning sequence**
18:00–26:00	**Plan access + facilitation**	Use Monday's anticipated barriers to select access routines, questions, talk structures, and supports that preserve grade-level science thinking.	**Access + rigor**
26:00–36:00	**Plan written feedback + revision**	Draft one criterion-based written prompt and a student revision action that returns learners to their source, evidence, and science idea without giving the answer.	**Feedback loop**
36:00–41:00	**Prepare Wednesday routine + Friday evidence**	Bring one source/task and student-facing CUBS/CER plan to Wednesday; identify the completed writing and feedback evidence needed Friday.	**Implementation bridge**

PROTECTED INDIVIDUAL WORK WITH COLLEAGUE SUPPORT

WORK WITH COLLEAGUES

WHAT TO DO Draft the lesson and feedback plan independently first. Then use colleagues to test whether the task progression, access supports, feedback prompt, and revision action are clear, rigorous, and tied to the priority standard.

1. **Use Monday evidence:** Keep the task, anticipated response, and mastery bar visible.
2. **Plan toward the standard:** Map the learning experience students need before the response.
3. **Protect access + rigor:** Select supports that help students engage in the same science thinking.
4. **Write feedback + revision:** Name the criterion, prompt, student action, and evidence look-for.
5. **Prepare to implement:** Bring one source/task and plan for completed student writing Friday.

USE THIS REFERENCE DURING GROUP WORK

PLAN THE LEARNING, NOT JUST THE TASK
Move from source and visual analysis to evidence use, scientific reasoning, CER writing, feedback, and revision. Keep the standard and mastery bar visible.

ACCESS WITHOUT LOWERING RIGOR
Use vocabulary, annotated visuals/data, structured talk, strategic sentence frames, CUBS, and facilitation questions to help students enter the work without completing it for them.

WRITTEN FEEDBACK MUST PROMPT REVISION
Name one criterion, point students back to the source or response, and ask for one specific revision action that produces new evidence of learning.

COLLABORATION IN PRACTICE Protect time for thoughtful individual work; use respectful, student-centered feedback to make the next decision clearer.

TEACHER RUBRIC CONNECTION **Standard I: I-A-4 Well-Structured Lessons • Standard II: II-A-2 Student Engagement • Standard II: II-D-2 High Expectations • Standard IV: IV-A-1 Reflective Practice**

01 **Use Monday evidence**
Keep the task, mastery bar, and anticipated responses visible.

→

02 **Plan the learning arc**
Move from source analysis to discussion, explanation, CER, and a checkpoint.

→

03 **Plan access + facilitation**
Choose supports and questions that preserve the science demand.

→

04 **Plan feedback + revision**
Write one criterion-based prompt and the student action it should produce.

→

05 **Prepare to implement**
Bring a student-facing source/task and plan to collect completed writing.

TODAY'S MOVE: Monday reflection → lesson plan → access/facilitation → written feedback + revision → completed student writing
