SCIENCE DEPARTMENT • SCIENCE LITERACY & LESSON INTERNALIZATION

PLC AGENDA

Completed Writing → Written Feedback → Next Steps for Standard Mastery

Science Literacy Learning Cycle — Analyze completed student writing from the benchmark, provide revision-oriented written feedback, and plan a precise next learning step tied to the standard.

FRIDAY, OCTOBER 30, 2026 | **46 MINUTES** | **GRADES 9–12 SCIENCE • BRING FORMS & EVIDENCE**

TODAY'S OUTCOME Leave with a shared mastery bar, evidence from completed benchmark writing, one criterion-based written feedback prompt, a clear student revision action, and one narrow next learning experience/evidence check for standard mastery.

WHY THIS PLC MATTERS Completed student writing shows what learners can already do and what they need next. Reading the work against an agreed mastery bar makes feedback and next steps more precise, while protecting the grade-level science thinking in the task.

PROTOCOL CONNECTION
Every Day Questions 1, 3, and 4; Team Deep Dive Steps 3–5; After-Lesson Reflection: clarify the standard and student product, read evidence in the work, respond with feedback, and adjust practice for the next learning experience.

WHAT TO BRING
A small de-identified set of completed benchmark writing or comparable science responses; the task/source/visuals; priority standard and mastery bar; colored annotation tools; current written feedback or revision plans; next lesson materials; and Lesson Internalization Tool.

FOCUS TO PROTECT
Start with completed student writing. Use the agreed criteria to describe what is visible in claims, evidence, reasoning, source use, and scientific language. Do not rank students, teachers, classes, or courses; do not design a broad reteach plan.

TODAY'S PLC PLAN

TIME (MIN)	FOCUS	WHAT TO DO	PRODUCT / CHECK
0:00–4:00	**Reconnect to the evidence cycle**	Revisit the benchmark experience, lesson planning, student-facing CUBS/CER routine, and completed student writing that is now available.	**Evidence story**
4:00–10:00	**Set the mastery bar**	Review the standard, task/source/visuals, student product, and the observable claim, evidence, reasoning, and language features that show mastery.	**Shared criteria**
10:00–22:00	**Analyze completed student writing**	Independently annotate a small de-identified set. Mark what is visible, identify what is partial/missing/confused, and distinguish science, source-use, and writing/reasoning needs.	**Writing evidence**
22:00–30:00	**Calibrate written feedback + revision**	Select one criterion and draft a brief written comment that points students back to their response/source and requests a specific revision without giving the answer.	**Feedback action**
30:00–41:00	**Plan a narrow mastery next step**	Choose a student revision action, teacher move, and short next learning experience/evidence check that respond directly to the writing evidence.	**Next instruction**
41:00–46:00	**Close the cycle**	Confirm how feedback, revision, and the next evidence check will show progress toward the priority standard.	**Evidence commitment**

PROTECTED INDIVIDUAL WORK WITH COLLEAGUE SUPPORT

WORK WITH COLLEAGUES

WHAT TO DO Read and plan independently first. Then use colleagues to check whether the written-feedback prompt, student revision action, and next learning experience are justified by the evidence in the student writing and move the priority standard forward.

1. **Anchor in the mastery bar:** Use the standard, task, source/visuals, and criteria before interpreting writing.
2. **Analyze completed writing:** Mark claim, evidence, reasoning, and scientific language that is visible, partial, or missing.
3. **Write feedback that prompts revision:** Name one criterion, return students to the work, and request one thinking action.
4. **Plan a narrow next step:** Choose a student action and teacher move that advance the same standard.
5. **Set the next evidence check:** Collect a short response or revision to see whether the next step worked.

USE THIS REFERENCE DURING GROUP WORK

READ THE WORK AGAINST THE STANDARD
Use the agreed mastery bar to identify evidence in completed responses. Start with what students can do and name the specific criterion that needs strengthening.

WRITTEN FEEDBACK MUST PROMPT STUDENT ACTION
A useful comment names the criterion, directs students back to their response or source, and asks for a revision: select evidence, explain a connection, correct, clarify, compare, or extend.

RESPOND PRECISELY FOR MASTERY
Choose a targeted conference, feedback prompt, focused re-read, annotated-model comparison, or next task. Maintain the science demand and verify the change with new evidence.

COLLABORATION IN PRACTICE Protect time for thoughtful individual work; use respectful, student-centered feedback to make the next decision clearer.

TEACHER RUBRIC CONNECTION **Standard I: I-A-4 Well-Structured Lessons • Standard II: II-D-2 High Expectations • Standard IV: IV-A-1 Reflective Practice • Standard IV: IV-C-1 Professional Collaboration**
