NEW BEDFORD HIGH SCHOOL · SCIENCE DEPARTMENT · DISTRICT PD

From Writing Benchmark to Lesson, Feedback & Student Evidence

Science Literacy focus: Tuesday continues Monday's real task and benchmark work, embeds success criteria in the lesson plan, and prepares the evidence Friday will use to adjust instruction

TUESDAY, NOVEMBER 3, 2026 | **7:30–11:00 · 12:00–2:30** | **ALL SCIENCE COURSES**

TODAY'S OUTCOME

Leave with five connected products: a refined writing benchmark; an expected response guide and student-thinking plan; student-facing success criteria; a ready-to-teach lesson with feedback, revision, and criteria embedded; and Friday's evidence and reflection record.

MORNING · 7:30–11:00 | REFINE THE TARGET, SHARE PRACTICE, AND WRITE CRITERIA

7:30–7:50	**Launch: vision, mission, theme & reflection** Establish a shared purpose, then discuss grade-level tasks, drafted responses, and targeted feedback.	PRODUCT Shared purpose
7:50–8:05	**Professional reading & discussion — why drafting a student response matters** Read *Drafting a Student Response Matters*, then connect it to this task: standard depth, cognitive demand, language demands, evidence of learning, and likely misconceptions.	PRODUCT Shared rationale
8:05–8:35	**Session 1 — refine the writing benchmark** Test Monday's draft against the standard, task depth, evidence, reasoning, vocabulary, and independence.	PRODUCT Benchmark
8:35–9:15	**Session 2 — anticipate student thinking & plan supports** Use the benchmark to name essential response elements, likely strengths and needs, and the reading and writing supports students will use.	PRODUCT 2 Expected response guide & student-thinking plan
9:15–9:25	**BREAK**	
9:25–9:37	**Teacher sharing — how students see quality** Share one routine already used to make quality visible, then name the student action it produces and one idea to adapt.	PRODUCT Shared practice
9:37–10:10	**Session 3 — write student-facing success criteria** Draft three to five observable indicators grounded in the benchmark, not in generic rubric language.	PRODUCT Success criteria
10:10–11:00	**Make criteria visible & place them in the lesson** Choose how students will see and use the criteria, then map where the criteria, benchmark, and task appear in the upcoming lesson.	PRODUCT Lesson draft

AFTERNOON · 12:00–2:30 | PLAN THE LEARNING EXPERIENCE AND FRIDAY'S EVIDENCE

12:00–12:15	**Re-entry and synthesis** Review the sequence: task → benchmark → criteria → lesson → feedback → student action → evidence.	PRODUCT Shared workflow
12:15–1:05	**Session 4 — ready-to-teach lesson** Complete the lesson with criteria, reading and writing supports, checks for understanding, and protected student thinking time.	PRODUCT 4 Lesson plan
1:05–1:35	**Session 5 — feedback that prompts action** Plan feedback that names a strength, sets one next step, and gives students time to revise, explain, re-read, annotate, or practice.	PRODUCT 4 Feedback & student action
1:35–1:45	**BREAK**	
1:45–2:05	**Plan student action after feedback** Decide what students will revise, explain, model, annotate, recheck, or practice — with protected time to do it.	PRODUCT Revision plan
2:05–2:30	**Session 6 — Friday evidence, reflection & commitment** Use the Looking at Student Work protocol to plan Friday's evidence set, then complete the Lesson Internalization reflection and name one team commitment.	PRODUCT Evidence plan

BRING TO FRIDAY

The task students completed, the refined benchmark and expected response guide, the success criteria, three to five student samples, and the Lesson Internalization Tool.

PACING CHECK

What requires teacher modeling? When will students independently think and write? When will feedback occur, and when will students act on it?
