NEW BEDFORD HIGH SCHOOL · SCIENCE DEPARTMENT PLC

Use Student Work to Plan Feedback & the Next Learning Experience

The evidence-check step in the Science Literacy Learning Cycle

FRIDAY, NOVEMBER 6, 2026 | **45 MINUTES** | **GRADES 9–12 SCIENCE**

TODAY'S OUTCOME

Leave with: one documented learning pattern, feedback students can act on, a revision or practice action, one instructional adjustment, and the next evidence check.

TODAY'S PLC PLAN

0–8 MIN	**Reconnect to the target** Restate the standard, task, writing benchmark, and success criteria. Choose one or two criteria that will guide the reading.	PRODUCT Shared lens
8–22 MIN	**Read & describe the evidence** Read three to five student samples silently. Mark what students did independently, then sort the evidence by learning need.	PRODUCT Learning pattern
22–36 MIN	**Plan feedback & student action** Name a strength with evidence, choose one high-leverage next step, and decide what students will revise, explain, model, annotate, or practice.	PRODUCT Feedback + revision
36–45 MIN	**Adjust & set the evidence check** Place one response in the next lesson and decide what evidence students will produce, when the team will review it, and the question it will answer.	PRODUCT Next instruction

BRING

Three to five student samples; the task or source students completed; the writing benchmark and answer key; success criteria; and the Lesson Internalization Tool.

PROTOCOL CONNECTION

Read the work against the criteria, describe the evidence before deciding, return thinking to students, and choose the next learning experience.

Evidence anchor: Student work is evidence for an instructional decision. It is never a ranking of students, teachers, classes, or courses.
