

PLC AGENDA

Review Student Evidence Together

Identify a learning pattern and decide what students need next.

FRIDAY, SEPTEMBER 18, 2026

46 MINUTES

GRADES 9–12 SCIENCE • BRING THE SAME LESSON FORWARD

TODAY'S OUTCOME Leave with one shared student-learning pattern, evidence that supports the pattern, and a priority need that will guide the team's next instructional response.

WHY THIS PLC MATTERS Reviewing student evidence together helps teams identify what students understand, where reasoning remains partial, and what next move will best support learning at scale.

PROTOCOL FOCUS

Lesson Internalization Tool — After-Lesson Reflection and Forward Planning; Team Deep Dive Step 4: monitor learning, provide feedback, and use data to inform instructional decisions.

WHAT TO BRING

A small anonymous set of student work, exit responses, observation notes, or another source of evidence from a recently taught lesson.

FOCUS TO PROTECT

Look for patterns in student thinking, not individual students. Keep the conversation connected to the learning goal and evidence in front of the team.

TODAY'S PLC PLAN

TIME (MIN)	FOCUS	WHAT TO DO	PRODUCT / CHECK
0:00–4:00	Reconnect	Name the learning goal and evidence source. Set the focus on patterns in student thinking.	Shared learning focus
4:00–12:00	Quick evidence sort	Review the evidence and sort examples by approaches, strengths, partial understanding, or common needs.	Initial evidence sort
12:00–34:00	Protected team work	Identify the pattern. Discuss what the evidence shows about how students understood, explained, modeled, or used evidence.	One shared learning pattern
34:00–41:00	Decide the need	Name the priority instructional need and identify the next response students will need from the lesson sequence.	Priority need and response
41:00–46:00	Reflection & close	Write: What pattern in student thinking will guide our next instructional decision?	Evidence-based next step

PROTECTED COLLABORATIVE WORK

WORK WITH COLLEAGUES

WHAT TO DO Complete these steps with your course-alike team or co-teaching partner.

- 1. Anchor in the learning goal:** Keep the review connected to what students were expected to learn and demonstrate.
 - 2. Sort the evidence:** Notice approaches, strengths, partial understanding, and common misconceptions across the evidence set.
 - 3. Name the pattern:** Describe what the evidence suggests about student thinking without focusing on individual students.
 - 4. Choose the next need:** Decide the most useful instructional response for the next lesson or follow-up task.
- ✓ **Completion check:** Each team leaves with one shared learning pattern, evidence that supports it, and a priority instructional need for the next lesson.

USE THIS REFERENCE DURING GROUP WORK

LEARNING GOAL

Begin with the knowledge, skill, language, or practice students were expected to demonstrate.

EVIDENCE PATTERN

Name a shared pattern supported by multiple pieces of student evidence.

NEXT DECISION

Identify one priority need that should guide the next lesson, feedback move, or follow-up task.

COLLABORATION IN PRACTICE Collaborate with respect and precision: examine the evidence, use asset-based language about students, and keep the discussion focused on the next learning decision.
