PLC AGENDA

SCIENCE DEPARTMENT • LESSON INTERNALIZATION & GOAL SETTING

Build & Calibrate the Next Evidence Check

Use the goals and Lesson Internalization Tool to develop or refine a standards-aligned writing benchmark or comparable course evidence task, success criteria, and feedback-to-action plan.

FRIDAY, OCTOBER 23, 2026 | **46 MINUTES** | **GRADES 9–12 SCIENCE • BRING FORMS & EVIDENCE**

TODAY'S OUTCOME Leave with one standards-aligned evidence task or writing benchmark, clear criteria or a model response, anticipated student responses, a feedback-to-action plan, and completed goal-form revisions or next steps.

WHY THIS PLC MATTERS Goals become meaningful when teachers can collect evidence connected to the priority standard and skill. A well-designed writing benchmark, constructed response, model explanation, data-analysis task, or equivalent course check makes student thinking visible for the next planning decision.

PROTOCOL CONNECTION
Every Day Question 1 and Team Deep Dive Step 2: identify mastery evidence, success criteria, and an exemplar. Question 3 and Step 4: anticipate responses and plan feedback that prompts action. Question 4 and Step 5: plan access, pacing, materials, and the student experience. After-Lesson Reflection: return to evidence and decide the next response.

WHAT TO BRING
Goal Setting Form; Self-Assessment Form; course standards and priority skills; October 16 lesson/task; draft writing benchmark, constructed-response question, or comparable evidence task; Lesson Internalization Tool.

FOCUS TO PROTECT
Develop one focused, grade-level evidence task that makes the priority skill visible. Do not create a broad new test, lower the cognitive demand, or spend the PLC reviewing every benchmark item.

TODAY'S PLC PLAN

TIME (MIN)	FOCUS	WHAT TO DO	PRODUCT / CHECK
0:00–4:00	**Reconnect to goals + evidence**	Restate the priority standard, skill, Student Learning Goal, and Professional Practice Goal. Select the student product or evidence check that will make progress visible.	**Shared focus**
4:00–11:00	**Define the evidence task**	Clarify the question or task, student product, criteria for success, and language demands. Decide what students must explain, model, analyze, or argue from evidence.	**Task + criteria**
11:00–23:00	**Protected task build/review**	Develop or improve the writing benchmark, constructed response, CER, data-analysis question, model explanation, or course-equivalent evidence task.	**Draft evidence task**
23:00–32:00	**Anticipate + calibrate responses**	Identify a strong response, partial responses, likely misconceptions, and scoring expectations. Draft a concise exemplar, checklist, or rubric note.	**Response set + scoring**
32:00–40:00	**Plan feedback → student action**	Plan the feedback prompt, how students will revise, correct, explain, compare, or apply learning, and what evidence will follow the action.	**Feedback-to-action plan**
40:00–43:00	**Quick forms audit**	Confirm that both goals use the same evidence story: priority standard/skill → instructional response → student evidence → review point.	**Aligned form check**
43:00–46:00	**Close & follow-up**	Name when the evidence will be used and the course-alike date or moment for student-work review and next-lesson adjustment.	**Evidence-review date**

PROTECTED INDIVIDUAL WORK WITH COLLEAGUE SUPPORT

WORK WITH COLLEAGUES

WHAT TO DO Complete the designated form work individually first; use colleagues for clarification, feedback, and calibration.

1. **Carry the priority forward:** Use the same standard, target skills, and student-learning need identified in the benchmark-data work.
2. **Build a visible student product:** Draft or revise one prompt/task that requires the priority skill and gives students enough information to demonstrate it.
3. **Write success criteria:** Name what accurate content, thinking, reasoning, representation, and language should be present in a strong student response.
4. **Plan feedback that prompts action:** Use criteria, questions, models, or targeted supports so students revise, correct, extend, explain, compare, or apply.
5. **Set the evidence review:** Decide what will be collected, how the team will review it, and how it will inform the next learning experience.

USE THIS REFERENCE DURING GROUP WORK

QUESTION 1: MASTERY EVIDENCE
Make the standard and priority skill visible in the student task, success criteria, and model response or exemplar.

QUESTION 3: ANTICIPATE + RESPOND
Plan for strong, partial, and incorrect responses before students begin. Use feedback that helps students do the next thinking step.

COURSE-ALIKE CALIBRATION
Biology teams may develop writing benchmarks; every other course team may create an equivalent grade-level explanation, model, data-analysis, or CER evidence task.

COLLABORATION IN PRACTICE Protect time for thoughtful individual work; use respectful, student-centered feedback to make the next decision clearer.
TEACHER RUBRIC CONNECTION **Standard I: I-A-1 Subject Matter Knowledge • I-A-4 Well-Structured Lessons • Standard II: II-D-2 High Expectations • Standard IV: IV-C-1 Professional Collaboration**
