NEW BEDFORD HIGH SCHOOL · SCIENCE DEPARTMENT PLC

Reflect on the Lesson and Plan the Next Step

Use student evidence to decide what students need next.

FRIDAY, NOVEMBER 13, 2026 | 46 MINUTES | GRADES 9–12 SCIENCE

TODAY'S OUTCOME

Leave with: One next instructional step, grounded in what students actually showed.

TODAY'S PLC PLAN

0–4 MIN	**Revisit the goal** Return to the lesson goal and success criteria before looking closely at the student work.	PRODUCT Shared lens
4–10 MIN	**Read the evidence** Review the work quietly and describe where student thinking was strongest and where it stalled.	PRODUCT Initial evidence notes
10–31 MIN	**Reflection rounds** Use three seven-minute turns: what happened (2 min), examine evidence (3 min), and decide a next step (2 min).	PRODUCT Evidence-based insight
31–40 MIN	**Plan the next step** Keep a move that worked, adjust one element, and name the evidence that will show whether it helped.	PRODUCT Adjustment + check
40–46 MIN	**Share the commitment** Each teacher shares the adjustment, the evidence that led to it, and the check that will show its impact.	PRODUCT Shared commitment

BRING

The lesson plan and task; 3–5 pieces of student work; notes on pacing and questions; and what surprised you in the lesson.

PROTOCOL CONNECTION

After-lesson reflection and forward planning: describe what students showed, decide what changes, and identify what comes next.

Evidence anchor: If the planned lesson was not taught, use a recent lesson with its actual student work and notes; do not invent evidence.
